

Monitoring the Bioeconomy

What is BioMonitor?

BioMonitor addresses the information gap in the bioeconomy research by re-structuring its existing data and modelling framework.

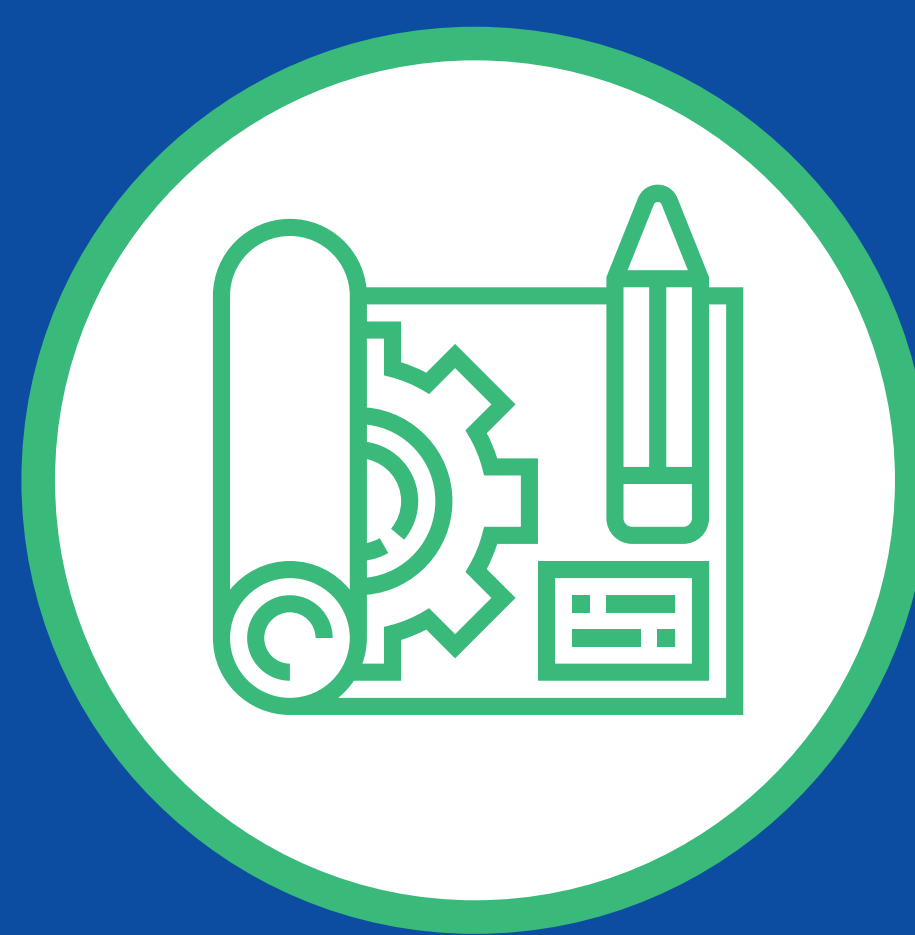

The ultimate goal of the project is to get a clearer picture of how the bioeconomy affects our lives.

The BioMonitor framework will enable professional stakeholders to monitor and measure the bioeconomy and its economic, environmental and social impacts in the EU and Member States.

The project works in a three-fold approach by:

Closing the data gaps observed when measuring the bioeconomy by using new and improved datasets

Enhancing existing modelling tools that guide industries and policymakers in defining long-term strategies

Creating a stakeholder engagement platform and training modules to validate and disseminate the data and modelling framework developed by the project
